THE JOURNAL OF MATHEMATICAL BEHAVIOR

VOLUME 25 **2006**

TITLE INDEX

A

A case study of different types of arguments emerging from explorations in an interactive computerized environment. Ilana Lavy, 2: 153

A climbing girl's reflections about angles. Anne Birgitte Fyhn, 2: 91

A sense-making approach to proof: Strategies of students in traditional and problem-based number theory courses. Jennifer Christian Smith, 1: 73

A third grader's way of thinking about linear function tables. Mara Martinez and Bárbara M. Brizuela, 4: 285

Associative and reflective connections between the limit of the difference quotient and limiting process. Markus Hähkiöniemi, 2: 170

D

Does mathematical learning occur in going from concrete to abstract or in going from abstract to concrete? Wolff-Michael Roth and SungWon Hwang, 4: 334

E

Exploring the role of metonymy in mathematical understanding and reasoning: The concept of derivative as an example. Michelle J. Zandieh and Jessica Knapp, 1: 1

I

Investigating functional thinking in the elementary classroom: Foundations of early algebraic reasoning. Elizabeth A. Warren, Tom J. Cooper and Janeen T. Lamb, 3: 208

L

Looking at the complexity of two young children's understanding of number. Jennifer S. Thom and Susan E.B. Pirie, 3: 185

M

Making sense of instruction on fractions when a student lacks necessary fractional schemes: The case of Tim. John Olive and Eugenia Vomvoridi, 1: 18

Mathematics in the home: Homework practices and mother–child interactions doing mathematics. Janet S. Hyde, Nicole M. Else-Quest, Martha W. Alibali, Eric Knuth and Thomas Romberg, 2: 136

O

On the relation of abstract and concrete in scientists' graph interpretations: A case study. Wolff-Michael Roth and SungWon Hwang, 4: 318

P

Prevailing educational practices for area measurement and students' failure in measuring areas. Konstantinos Zacharos, 3: 224

Productive thinking about area: An introduction to the paper by Kamii and Kysh. Bob Speiser, 2: 103

Prospective teachers' reactions to *Right-or-Wrong* tasks: The case of derivatives of absolute value functions. Pessia Tsamir, Shaker Rasslan and Tommy Dreyfus, 3: 240

R

Recursive and explicit rules: How can we build student algebraic understanding? John K. Lannin, David D. Barker and Brian E. Townsend, 4: 299

Research, practice, uncertainty and responsibility. Ole Skovsmose, 4: 267

S

Students' conceptual understanding of a function and its derivative in an experimental calculus course. Samer Habre and May Abboud, 1: 57

Students' understanding of mathematical objects in the context of transformational geometry: Implications for constructing and understanding proofs. Neil Portnoy, Todd A. Grundmeier and Karen J. Graham, 3: 196

Students' use of technological features while solving a mathematics problem. Hollylynne Stohl Lee and Karen F. Hollebrands, 3: 252

doi:10.1016/S0732-3123(06)00060-5

T

The difficulty of "length × width": Is a square the unit of measurement? Constance Kamii and Judith Kysh, 2: 105

The emergence of multiplicative thinking in children's solutions to paper folding tasks. Susan B. Empson and Erin Turner, 1: 46

"Then you can take half … almost" — Elementary students learning bar graphs and pie charts in a computer-based context. Lisbeth Åberg-Bengtsson, 2: 116
